

WHAT STINKS? COULD IT BE YOUR RV?

YOU DON'T HAVE TO LIVE WITH THAT SMELL ANYMORE!

There is not one chemical that is currently on the market that truly cleans RV holding tanks and tank sensors as they all advertise. **Every black tank chemical product** claims that their product dissolves, breaks down, or liquifies waste the waste in your RV's holding tanks.

Indeed, that is exactly what they do.

What they don't tell you is that these tank additives create a sludge or thick pancake-like batter in the tanks and make it impossible to keep tanks completely clean and sensors reading properly.

In other words, these chemicals make a big "mess" in your tanks.

Try this instead:

Mix 40 ounces of PINE-SOL® with 8 ounces of Calgon Ageless Bath Pearls in a gallon jug. Top off with enough water to fill. Shake gently. Allow foam to die down. Use four to eight ounces (as directed) in each tank (more in especially hot weather or if your tanks will be filling up slowly over time).
